Given a basic hypergeometric series with numerator parameters a_1, a_2, \dots, a_r and denominator parameters b_1, \dots, b_r , we say it is almost poised if $b_i = a_1 q^{\delta_i} a_i \delta_i = 0, 1$ or 2 , for $2 \leq i \leq r$. Identities are given for almost poised series with $r = 3$ and $r = 5$ when $a_1 = q^{-2n}$.

Basic almost-poised hypergeometric series - CORE

In mathematics, basic hypergeometric series, or q -hypergeometric series, are q -analogue generalizations of generalized hypergeometric series, and are in turn generalized by elliptic hypergeometric series. A series x_n is called hypergeometric if the ratio of successive terms x_{n+1}/x_n is a rational function of n . If the ratio of successive terms is a rational function of qn , then the series is called a basic hypergeometric series. The number q is called the base. The basic ...
