In extreme halophiles, the major phospholipid is the archaeol analogue of phosphatidylglycerolmethylphosphate (PGP-Me); the glycolipids are sulfated and/or unsulfated glycosyl archaeols with diverse carbohydrate structure characteristic of taxons on the generic level.

Biology of halophilic bacteria, Part II | SpringerLink

Halophilic enzymes and biotechnological applications. Applications of halophilic microorganisms are varied and strains from both domains possess great biotechnological potential . As halophiles possess the ability to flourish in saline environment which limits the growth of other microbial life,are used in producing transgenic crops with salt tolerant character. Halobacteriaceae contributes the production of certain carotenoid pigments helping absorption of light and increasing evaporation ...

Biology and Applications of Halophilic Bacteria and ...

Moderately halophilic bacteria constitute a heterogeneous physiological group of microorganisms which belong to differ-ent genera. Our current knowledge of the taxonomic status of these bacteria contrasts with early studies, since in 1980 only six moderately halophilic species were included in the Ap-

Biology of Moderately Halophilic Aerobic Bacteria

This review presents overview of the halophilic biology with special focus on taxonomy, diversity, habitat, osmoadaptation and biotechnological applications of Bacteria and Archaea. The universal...

Introduction. Biology of halophilic bacteria: Research ...

Halophilic bacteria contain an unusual dialkyl type of glycerolipid (a diphytanyl ether analog of phosphatidylglycerophosphate) that has an opposite stereochemical configuration from all other known ether-linked lipids, i.e. the ether linkages are located at the sn-2 and sn-3 positions. Halophilic Bacterium - an overview | ScienceDirect Topics

SUMMARY The moderately halophilic heterotrophic aerobic bacteria form a diverse group of microorganisms. The property of halophilism is widespread within the bacterial domain. Bacterial halophiles are abundant in environments such as salt lakes,

saline soils, and salted food products. Most species keep their intracellular ionic concentrations at low levels while synthesizing or accumulating organic solutes to provide osmotic equilibrium of the cytoplasm with the surrounding medium. Complex ...

Biology of Moderately Halophilic Aerobic Bacteria ...

In bacteria: Salt and water ...environments and are thus called halophiles. Extreme halophiles, such as Halobacterium, show optimum growth in conditions of 20 to 30 percent salt and will lyse (break open) if this salt level is reduced. Such bacteria are found in the Dead Sea, in brine ponds, and occasionally on salted fishes and... Read More

Halophile | biology | Britannica

The first strategy is employed by the majority of halophilic bacteria, some archaea, yeasts, algae, and fungi; the organism accumulates organic compounds in the cytoplasm— osmoprotectants which are known as compatible solutes. These can be either synthesised or accumulated from the environment.

Halophile - Wikipedia

The colors of halophilic bacteria are due to carotenoid pigments, and there is evidence that this pigmentation protects the bacteria from the bright sunlight to which they are naturally exposed (Larsen, 1962; Nandy and Sen, 1967). Many different moderately halophilic bacteria have been isolated, some from spoiled foods but most from curing brines and salted food products and some from saline soils (for several references see Flannery, 1956; Ingram, 1957; Keller and Henis, 1967; Larsen, 1962 ...

4Department of Microbiology, Bharathidasan University, Tiruchirappalli, Tamil Nadu, India ABSTRACT Halophilic bacteria are organisms which inhabit the salt-rich environment and are capable of producing wide variety of bioactive compounds. Sediment samples were collected from four different sites of Marakkanam salt pan, Tamil Nadu.
