Biology The Great Animal Systems

Higher animals are composed of trillions of differentiated cells, and thus need some way to maintain their structural integrity. Many invertebrate animals (such as insects and crustaceans) have external body coverings composed of chitin and other tough proteins, called exoskeletons. Sharks and rays are held together by cartilage. Vertebrate animals are supported by internal skeletons—called endoskeletons—assembled from calcium and various organic tissues.

The 12 Animal Organ Systems and Their Functions

[PDF] Biology The Great Animal Systems Challenge Answers Faculty in Animal Systems Biology study complex physiological and developmental processes in model animals. These systems offer important experimental advantages in their accessibility, genetic resources, or amenability to specialized biochemical and molecular analysis. The systems used include rats and mice, zebrafish, the fruit fly *Drosophila*, and the nematode worm *C. elegans*. With modern tools and techniques, our faculty creatively ...
