The hardware is actually the opposite of embedded - the processor (80188, pretty much an 80186 with an 8-bit bus) communicates with the peripherals (USART controllers, parallel interfaces, EPROM, SRAM, timers, interrupt controller, etc) through a classic 8bit parallel bus with a bunch of parallel addressing (with the help of some 74ls series decoders, latches, and simple logic). So, yeah, the ...
