1.1.1 Introduction Electromagnetics involves the macroscopic behavior of electric charges in vacuum and matter. This behavior can be accurately characterized by the Lorentz force law and Maxwell's equations, which were derived from experiments showing how forces on charges depend on the relative locations and motions of other charges nearby.

### **Introduction to Electromagnetic Theory**

Due to this dependence, the fields form an electromagnetic wave, also called electromagnetic radiation (EMR). The electric and magnetic fields are perpendicular to each other, and to the direction of propagation of the electromagnetic wave. Visible light is a form of electromagnetic radiation. The speed of propagation of electromagnetic waves calculated from Maxwell's equations is identical to the measured speed of light. It was this result that led Maxwell to conclude that light ...
