Multithreading--dividing an application into multiple independent streams of execution--is a powerful but potentially intimidating programming technique. Multithreading Applications in Win32: The Complete Guide to Threads teaches you how to build multithreaded applications step by step, starting with simple examples and gradually introducing complicating factors and the Win32 APIs you'll need to deal with them.

With MSVC, there are several ways to program with multiple threads: You can use C++/WinRT and the Windows Runtime library, the Microsoft Foundation Class (MFC) library, C++/CLI and the .NET runtime, or the C run-time library and the Win32 API. This article is about multithreading in C. For example code, see Sample multithread program in C.

Multithreading is supported under Windows NT and Windows 95 and later through the Win32 API, but coverage of this important topic has been sporadic and incomplete until now. In Multithreading Applications in Win32, with just enough theory and lots of sample code, Jim Beveridge and Bob Wiener show developers when, where, and how to use multithreading. Included in the book are: \*Internet development examples, including ISAPI and WinSock. \*Hands-on coverage of how to use threads and overlapped ...

It does a very good job at describing the Win32 API for multithreading but the applications of multithreading assumed is strictly I/O related (Networking, printing, writing/reading files). The set of techniques for parallel processing on the same data is completely absent such as data organization in memory to optimize its parallel access. This is probably due to the age of the book as when it has been written, single core processor system was the norm. Parallel processing will become very ...

TL;DR: Firefox used to have a great extension mechanism based on the XUL and XPCOM. This mechanism served us well for a long time. However, it came at an ever-growing cost in terms of maintenance for both Firefox developers and add-on developers. On one side, this growing cost progressively killed any effort to make Firefox secure, fast or to try new things.
