Physiological is the branch of biology that deals with the standard functions of living organisms and parts of their body. Another way of explaining the term is that it is the way a human or other being functions in the normal way. Anything that leads to action of movements from us is it part of our bodies or instinct becomes related to physiology as it helps to deduce different phenomena related to our daily lives. The best example of this case comes when we watch a movie, if the ...

The Physiological Basis Of Stress What goes on inside our bodies when we experience stress? The physiological mechanisms of stress are extremely complex, but they generally involve the work of two systems—the sympathetic nervous system and the hypothalamic-pituitary-adrenal (HPA) axis. When a person first perceives something as stressful (Selye's alarm reaction), the sympathetic nervous system triggers arousal via the release of adrenaline from the adrenal glands. Release of these ...

A biological basis of physical activity implies an inherent control center within the central nervous system that regulates one's daily energy expenditure through motor activity. Such a center is a distinct anatomical-physiological entity, analogous to brain centers that control temperature, hunger, and sexual arousal. And, similar to these other biological regulators, an intrinsic activity ...

Physical illusions are caused by the physical environment, e.g. by the optical properties of water. Physiological illusions arise in the eye or the visual pathway, e.g. from the effects of excessive stimulation of a specific receptor type. Cognitive visual illusions are the result of unconscious inferences and are perhaps those most widely known.
